- Generate and configure usage of a certificate revocation list for the client/server

- Configure client and server to enforce usage of TLS version 1.2 or later

- Configure web server to log which client certificate is used to request resources

Lab report/documentation

Each student should submit a lab report containing **at least** the following information ("G"):

- Description of which programs/commands were used to generate certificates

- Documentation of changes to the client script and server configuration

- Demonstration of how the implemented changes improve security of the service ("before and after")

The lab report should be provided as a plain text file (".txt"), Markdown
